

Toileting Sling & Toileting Sling High

Padded Arms
Reinforced Back
Divided Legs

Our Toileting Slings feature a wide, divided leg partition that enables fast and simple application for dressing and undressing during toileting or bathing. They are suitable for patients with poor trunk stability and feature padding under the arms for extra comfort and are available with extra head support or without.

Three Options

These Toileting slings are available in two low back models and one high back model with adjustable neck support for increased head stability. The wide partition of the leg parts makes the sling application fast and simple and enables dressing and undressing during toileting or bathing. All models can be used with or without an optional waist belt that is available in an assortment of sizes with a Velcro or buckle closure.

Optimal Positioning

The low back models feature an upright seated position that makes transferring to and from a toilet much easier. The high back model features a reclined (backward tilted)

position that prevents the user from sliding out of the sling and is especially beneficial for those hypertonic users that have a tendency to overstress themselves (spastic performance) or those hypotonic users with lesser body control.

Easy Care and Easy Fit

Our slings are manufactured to the highest quality standards. They feature reinforced straps and high strength nylon webbing around the sling to make them strong enough to resist even the most active use. Each sling label is colour coded to ensure quick and easy selection of the correct sling and the straps are colour coded for easy determination of required positioning.
