

Alpha Rollboard Vision

The Rollboard Vision is particularly well suited to gentle, pain-free and low-friction sideways transfers of people with restricted mobility as well as obese people. In particular, bumps or gaps which occur when two support surfaces are placed next to one another can be bridged. The transfer of recumbent persons can be supported in emergency situations, in order to minimise patient movement when a diagnosis isn't available yet.

The Alpha Rollboard Vision impresses with its outstanding ease of handling and uncompromising safety during transfer and care, thanks to its unique combination of hygienic features, quality, form and function. The Alpha Rollboard Vision combines size and value in its ability to handle the average size and weight of clients. The Rollboard requires a cover for use, for instance the Textile Cover, but we do recommend adding any of our covers and foils to this product.

During the development of the Alpha Rollboard Vision the demands on products for hospitals, clinics and other health facilities were taken into account along with the professional experience of people in caring professions.

All of the Rollboards have been tested and approved for use in X-ray and MRI scans.
